

Products to push the edge of knowledge

Since the start of **IsoLife** in 2005, our products have been used by researchers in a very broad scientific field in the Life Sciences, but especially in Ecology, Food and Nutrition, and Biochemistry and Metabolomics.

Since **IsoLife** emerged as an entirely **new company** bringing to market **new, unique plant-based ^{13}C tracers** produced with its cutting-edge labelling technology, it was not long before a growing stream of studies with these products appeared in scientific journals.

We are proud that many of them were published in highly rated magazines like *Nature Energy*, *SCIENCE*, *Nature Methods*, *Applied Catalysis B: Environmental*, *Journal of the American Chemical Society*, *PNAS*, *Green Chemistry*, and others, all with Impact Factors >10.

With the publication of [Wild et al. \(2023\)](#), we reached a milestone of **250 scientific articles that are (partly) based on IsoLife's products**.

We are happy with this milestone, demonstrating how our unique products contribute to advancement of science since 2005. **IsoLife** will strive to help to push science beyond the boundaries of current knowledge for a long time to come.
